WHAT SETS METRO APART

At Metro, we invest in keeping up with the latest advancements in GPR and training our technicians in the use of this technology. We pride ourselves on the speed and accuracy of our scans, and the knowledge and skill of our technicians.

- Skilled and trained technicians – OSHA safety certified
- Back up machines/redundant units on vehicles
- 3 different frequency radar antennas to suit varying concrete depths and conditions
- Electromagnetic sensor to detect live high voltage electricity drawing current
- Excellent customer service
- Competitive insurance & coverages for our commercial clients
- Next day service often available

SERVING THE WASHINGTON, D.C.
& BALTIMORE METRO AREAS SINCE 2005

METRO CONCRETE SCANNING

A Team You Can Trust

ABOUT US

Metro Concrete Scanning Corporation is a locally owned concrete inspection business in Annapolis, MD.

Established in 2005, we have more than 10 plus years of experience providing Ground Penetrating Radar (GPR) services to the construction industry in the Washington D.C. and Baltimore Metropolitan Areas.

Metro is committed to providing unparalleled customer service and response time to complete projects in a quick, efficient and cost effective manner.

WHY GPR VS. X-RAY?

GPR is a fast, easy, safe and effective way to non-destructively locate buried structures in concrete. Using a radar signal, GPR quickly detects the location of rebar, tension cables, pipes and conduit. It also measures slab thickness and target depths.

- Faster, less expensive and safer than X-ray
- Only requires access to single side of a concrete slab or wall
- Real-time inspection results
- Location and depth detection
- Non-hazardous to humans or electronics

OUR SERVICES

Metro Concrete Scanning is proud to offer a non-hazardous, non-destructive, safe and quiet option for concrete inspection. Using the smallest antennas on the market, our technicians can scan quicker and easier in tight locations or overhead.

Our services include:

- ➔ GPR Concrete Scanning
- ➔ Utility Locating
- ➔ Signal Induction
- ➔ Drill Spotting
- ➔ Concrete Cover Meter Services - locate, orient and measure rebar size and depth in concrete
- ➔ Sewer Line and Pipe Location
- ➔ Gravesite & Underground Storage Tank Locating
- ➔ 3-D Imaging and Reporting
- ➔ Technical Training and Demonstrations

Rates: 4 Hour day minimum \$600-\$750. Full day rate \$1200-\$1500. Prices vary based on job specifications - i.e., overtime, nights & weekend work. We accept all major credit cards, checks and PayPal.
